

CareWeave — Product Overview & User Guide

Version: 1.0 · Audience: Agency owners, administrators, schedulers, billers, caregivers, families, and prospective customers

1. What CareWeave Is

CareWeave is an end-to-end home care operations platform that unifies client intake, caregiver management, scheduling, EVV-verified visit capture, care planning, billing, payroll, and family/caregiver portals in a single centralized database. It is purpose-built for U.S. home care agencies serving Medicaid waiver programs (IHSS, CDASS, HCBS, etc.) and private-pay clients.

Core promise: every dollar billed and every dollar paid is tied to a GPS-verified EVV visit — never to a scheduled estimate — eliminating the audit and compliance risk that plagues most agencies.

Key Differentiators

- One source of truth. Clients, caregivers, schedules, EVV, billing, and payroll share the same records — no double entry, no spreadsheet exports.
 - Strict EVV integrity. Visits on paid invoices cannot be deleted; unpaid invoices auto-recalculate when EVV is corrected.
 - One-click weekly billing. A single run validates, blocks, generates, and submits invoices + 837P claims with full pre-bill compliance gates.
 - Configurable admin overrides. Office staff can override blocked validations with reason codes and notes; limits per role + reason auto-notify supervisors of unusual activity.
 - Multi-program aware. The same care-plan calculator and billing flow works for IHSS, CDASS, HCBS, VA, and private pay — programs are auto-detected from uploaded documents.
-

2. High-Level Architecture

3. Modules & Functions

3.1 Client Lifecycle

- Client Intake — Digital intake with canvas e-signatures; auto-promotes to active client on completion.
- Client Management — Demographics, payers, addresses, geofence settings, primary diagnosis, contacts, family members.
- Care Plans — Upload payer care-plan PDFs (IHSS, CDASS, HCBS, etc.); the system extracts authorized tasks/units, builds a calculator, and generates agency timesheets.
- Family Portal — Read-only view for authorized family members: schedule, visit history, photos, notes, and timesheet status.

3.2 Caregiver Lifecycle

- Caregiver Management — Hire, profile, skills, certifications, rates, employment status.
- Credentials — Track licenses, CPR, training expirations; blocks billing when expired.
- Training — Course assignments, completion tracking, certificates.
- Human Resources — Onboarding, employment records, terminations.

- Caregiver Portal — Mobile clock-in/out with GPS, daily schedule, tasks, EVV verification, and timesheet acknowledgement.

3.3 Scheduling & Visits

- Scheduling & Visits — Drag-and-drop weekly scheduling, conflict detection, hour caps.
- Recurring Visits — Generate recurring patterns for stable clients.
- Scheduling Intelligence — Suggests caregivers based on skills, certifications, location, and weekly hours.
- Live Map — Real-time caregiver locations and visit status.
- Visit Notes — Structured progress notes per visit, optionally clinical.
- Clinical — Vitals, ADL/IADL tracking, incident reports.

3.4 EVV (Electronic Visit Verification)

- Sandata Reports — Upload Sandata CSV exports per pay period and program.
- Sandata Batch Manager — Maintain a library of EVV exports tagged by period + program; the system auto-picks the correct batch per timesheet.
- EVV Reconciliation — Compares scheduled vs. verified visits, flags mismatches, blocks signing until resolved.

3.5 Care Plan & Timesheets

- Care Plan Calculator — Computes authorized vs. used units per task/program from the parsed care plan.
- Generated Timesheet — Pulls EVV-verified hours into a payer-formatted timesheet PDF.
- In-app E-Signature — Three-role workflow: caregiver, supervisor, client. Signed copies are stored for audit.
- Reminders — Email/SMS to each signer until fully signed and locked.

3.6 Finance — Billing & Revenue

- Billing & Invoicing — Manual invoice creation, edits, payments.
- Auto Billing *(one-click)* — Validates locked timesheets against EVV, authorizations, credentials, and payer rate sheets; generates invoices, 837P EDI claims, payer-specific CSVs, and PDFs.
- Pre-Bill Review Queue — Admin queue for blocked items. Approve with reason code + notes (auto re-runs billing and restores signing eligibility), reject, or re-run.
- Override Limits — Configurable per reason code × role: max single charge, daily count, weekly total, dual-approval requirement. Exceeding triggers a hard block + supervisor email.

- Override Alerts — Automatic supervisor notification on high-value ($\geq \$1,000$) or unusual-frequency ($\geq 5/\text{day}$) approvals; alert log preserved for audit.
- Revenue Cycle — 835 remittance posting, payment matching, claim aging, dunning reminders.
- Payers & Authorizations — Authorization tracking with units burndown, expiration alerts (75/90/100% used; 30/7/0 days out).

3.7 Payroll

- Payroll & Payments — Strictly uses verified EVV hours. Period close, caregiver pay statements, overtime detection.

3.8 Reports, Documents, Communication

- Reports & Analytics — Operational and financial dashboards.
- Documents — Centralized document storage tied to client/caregiver records.
- Messages — Internal messaging with role-based permissions.

3.9 Administration

- User Admin — Roles, invites, permissions.
 - Company Profile — Branding, addresses, NPI, tax IDs.
 - Subscription Tiers — Pricing tiers and feature gating (admin).
 - Web/Desktop Admin — Platform configuration.
-

4. Compliance & Financial Integrity Rules

These are enforced at the database and application layers — they cannot be bypassed by ordinary users:

- Billing and payroll only consume GPS-verified EVV hours.
 - Visits attached to paid invoices cannot be deleted.
 - Editing EVV on an unpaid invoice automatically recalculates the invoice.
 - Pre-bill validation blocks any timesheet missing: a locked signature, EVV reconciliation, an active authorization with remaining units, current caregiver credentials, or a documented payer rate.
 - Every override action is recorded in an immutable audit log with the actor, reason code, notes, and a snapshot of the blockers at the time.
-

5. How to Use CareWeave Effectively

Day 1 — Setup

1. Configure Company Profile (NPI, tax ID, branding).
2. Add Payers and upload Rate Sheets per service code.
3. Invite users and assign Roles (admin, scheduler, billing, supervisor, caregiver, family).
4. Configure Override Limits under Auto Billing (recommended starting points: \$1,000 single-charge cap for billing role; dual approval for `payer\_exception\_approved`).

Onboarding a Client

1. Run Client Intake → e-signature → auto-active.
2. Upload the payer Care Plan PDF → confirm parsed tasks/units.
3. Add Authorizations (auth #, units, dates, service code).
4. Build Recurring Visits or schedule individually.

Weekly Operations

1. Caregivers clock in/out via the Caregiver Portal (GPS-verified).
2. Live Map + Scheduling Intel flag late or missed visits.
3. End of week: upload Sandata exports to Batch Manager.
4. Run Care Plan timesheets → reconcile EVV → resolve mismatches → e-sign.

Weekly Billing

1. Open Finance → Auto Billing.
2. Click Preview for the prior week → review blockers in the Pre-Bill Review Queue.
3. Approve with reason codes where appropriate, or fix data and Re-run.
4. Click Commit to generate invoices, 837P claims, and exports.
5. Monitor payments under Revenue Cycle; Send Reminders for past-due invoices.

Monthly

- Review Override Alerts for unusual approval patterns.
- Run Reports & Analytics for utilization, authorization burndown, and AR aging.
- Audit Credentials and Training expirations.

6. Marketing Highlights

Theme	Message
****Speed****	One-click weekly billing replaces 8-12 hours of manual review.
****Compliance****	Every claim ties to a GPS-verified visit, with immutable audit trails.
****Visibility****	Live map, authorization burndown, AR aging, and override frequency in one screen.
****Multi-program****	Native IHSS, CDASS, HCBS, VA, and private-pay support — no per-program configuration.
****Family trust****	Real-time visibility for authorized family members increases retention.
****Audit-ready****	Pre-bill blockers, override reasons, signed timesheets, and remittance posting form a complete chain of custody.
****Configurable governance****	Admin override limits per role x reason with automatic supervisor escalation.

Suggested Taglines

- **"The only home care platform where billing follows the GPS."**
- **"From intake to remittance — one record, one click, zero rework."**
- **"Compliance you can audit. Operations you can scale."**

Target Buyer Personas

- Agency owner / operator (10-500 caregivers): needs to scale without hiring more billers.
- Director of Operations: needs visibility into authorizations, EVV exceptions, and AR.
- Billing Supervisor: needs override controls, audit trails, and 835 automation.
- Compliance Officer: needs immutable EVV → claim chain.
- Caregiver / Family: needs a simple mobile experience.

7. Glossary

- EVV — Electronic Visit Verification (federally mandated GPS-stamped clock-in/out).
- IHSS / CDASS / HCBS — Common Medicaid home care programs.
- 837P — Electronic professional claim format.
- 835 — Electronic remittance advice (payer's response to a claim).
- Authorization — Payer-issued unit allotment for a client and service.

- Pre-bill validation — Automatic gate that blocks billing on missing data.
- Override — Documented admin decision to bypass a blocked pre-bill issue.
